

PLASTIC MEDIUM-POWER COMPLEMENTARY SILICON TRANSISTORS

...designed for general-purpose amplifier and low speed switching applications

FEATURES:

- * Collector-Emitter Sustaining Voltage-
 $V_{CE(SUS)} = 60 \text{ V (Min) - TIP120, TIP125}$
 $= 80 \text{ V (Min) - TIP121, TIP126}$
 $= 100 \text{ V (Min) - TIP122, TIP127}$
- * Collector-Emitter Saturation Voltage
 $V_{CE(sat)} = 2.0 \text{ V (Max.) @ } I_C = 3.0 \text{ A}$
- * Monolithic Construction with Built-in Base-Emitter Shunt Resistor

FIG-6 ACTIVE REGION SAFE OPERATING AREA

There are two limitation on the power handling ability of a transistor: average junction temperature and second breakdown safe operating area curves indicate I_C - V_{CE} limits of the transistor that must be observed for reliable operation i.e., the transistor must not be subjected to greater dissipation than curves indicate.

The data of power is base on $T_{J(PK)}=150^\circ C$; T_C is variable depending on power level. second breakdown pulse limits are valid for duty cycles to 10% provided $T_{J(PK)} \leq 150^\circ C$. At high case temperatures, thermal limitation will reduce the power that can be handled to values less than the limitations imposed by second breakdown.
